Each unit is about 8-12 hours of English practice. Subscribers can try 4 of these demo units from each of the four levels before you buy the course. The content of the course is also very interesting to pilots and controllers because it covers important information you will need in your career, not just for the ICAO test. It is also the only complete Aviation English course, which offers courses from ICAO levels 2-4. If you are preparing for the ICAO English test, I recommend joining our mailing list and trying these free English lessons. What do you get in free demos? More than 30 hours of air English exercises including, listening and reading understanding, true or false questions, gap-filling exercises, multiple choices, vocabulary practice, and radiotelephony opportunities. If your grammar and listening skills are poor, I recommend trying lower-level courses that give you more grammar and listening practices. The upper level ICAO level 3 course is more focused on technical vocabulary, so don't worry about trying low-level units. There's plenty of good practice material for you. After trying demo units, I'm sure you'll want to buy a complete course. Looking for more free ICAO English exercises? One of the most important skills you can easily develop is reading. There are thousands of airline articles online, but only a few are suitable as learning material. Such is the skill of an English teacher in aviation who can carefully select suitable articles for use in the classroom. Keep an eye out for our blog and Facebook page for these articles. You can also read technical websites such such as a wiki created by a number of flight safety and training organizations. It makes fascinating reading and you can learn something new every time you visit. For listening practices, try listening to your . Always key information in each and soon you will get acquainted with different accents. Be careful, listening to air traffic control can become addictive. Now an iPhone app is available that makes listening even more convenient. Our YouTube channel contains a selection of videos, some of which even have ATC transcripts. But if there's so much free material out there, then why pay for the course? As English teachers in aviation, we want you to be independent learners so that self-learning as much as you can is a good thing. The difficulty is when you get an information overload and don't know where to focus your attention. With self-learning, you also lack feedback and guidance from teachers, who may be able to show you your mistakes or teach you an easier way to practice your skills. Another difficulty on the Internet is that it is easy to become distracted by advertisements and other things like msn messenger. It can be very easy to lose track of time and the study is not always productive. ICAO Aviation English Online is more efficient because it has a learning management system that tracks your progress and time spent in the course. In addition to showing you your mistakes, if you miss too many study sessions or fall behind in your study, we can give you a reminder. When you have a consistent rhythm study it is relatively easy to achieve half the ICAO level within 12 weeks. It's also easy to take things you learn online into the real world because it's also designed for blended classroom learning. So you can practice and expand everything you learn online with the teacher and other students in the classroom. At the end of the day it's all about being able to communicate effectively with real people. What to do next For feedback and more information on aviation English Asia courses visit . The consensus among those who teach English as a second language is that English should be taught by native English speakers. Our licensed FAA instructor pilots who wrote, approved FAA programs are from the United States of America and are trained to teach English, bring their own is placed in a classroom environment, along with our network of certified English as second Langue (ESL) instructors. You can only learn aviation English by practicing with realistic dialogues between pilots, maintenance controllers and air traffic controllers (ATC) and real-world conversations. We teach only aviation English and conversational English with the aim of teaching you, aviation English, understand it, give you vocabulary, clarity, pronunciation, sentence structures and confidence to navigate using English as a second language without the weight of all grammar rules. Our curriculum is designed to meet and exceed ICAO criteria at Operational Level 4 - 5 and 6. We teach our students with the following ICAO goals in mind: See Appendix 1: Holistic Descriptors, Manual on Implementing Language Requirements ICAO Second Edition 2010 page 4-5 a.b.c. d. d. e. and ICAO Circular 318-AN/180 Criteria for testing languages for global harmonization. Aviation English Classes also provides an aviation book store with quality ebooks and videos, an extensive growing library with free downloads, an audio pronunciation glossary, its own text course material, audio and video, one-on-one training, webinars and more. A new concept in teaching aviation English, pilots teach pilots, ATC and crew at a reasonable price. Our goal in teaching aviation english is to provide a framework for quality instruction of pronunciation, structure, vocabulary, fluency, understanding and interaction without the weight of all grammatical rules, with the ability to understand and communicate effectively within the ICAO criteria for global alignment. Aviation English Classes has developed a shadowing technique that is very effective in learning and speaking English. Shadow is an advanced learning technique in which you listen to text in a targeted language and then speak it aloud at the same time as the native speaker. Listen to case studies, conversations below to assess what understanding and verbal skills are needed, and what tools will help you communicate effectively. The pilots' stories below are about pilots who are and have been very skilled in their craft, however communication has been a problem and that is what we will solve in our training. (Below click on and play to hear some real aviation communications, that we can all learn from) Pilot Japan 7 Heavy in this example did a good job in navigating his second language. English and ATC showed the respect and kindness that all professionals expect. Before the fatal crash in Hillside in Cove Neck, N.Y., it shouldn't have happened. In this example, this is a very capable pilot, but it also shows a real need in aviation, for pilots Flight controllers take control of their communications when they speak. Speaking more slowly, giving clarity and pronunciation to your words will give you a much better result. Because others can speak quickly within the ATC doesn't mean you have to do the same. The question is, did the pilot fully understand the instructions given to him by the ATC? If he didn't understand the instructions he was given, what dangers could he pose to the safety of his crew and to others? These are very important issues that we will address in our teaching of English aviation. Another example of understanding the words used in aviation, China Northern Airlines Flight 6901 (CJ6901) was a McDonnell Douglas MD-82 aircraft flying from Beijing's Capital International Airport to Ürümqi Diwopu International Airport in Xinjiang, China. On November 13, 1993, he crashed on the approach to Ürümqi Airport. 12 of the 102 passengers and crew died. The accident is attributed to pilot error. While on final approach, the autopilot automatically shut down. The captain continued to reassess him, believing he would still be in APP mode. However, when activated, the autopilot went into VERT SPD mode with a setting of -800 feet per minute. The crew's failure to turn off the autopilot and manually ground the aircraft contributed to the accident. Another factor was the crew's lack of knowledge in English. When the GPWS (Ground Proximity Warning System) issued an audio alarm, the captain asked his first officer what the words Pull up meant. The first officer replied that he didn't know. Consequently, the pilots ignored the warnings and failed to correct their excessive descent speed, causing the aircraft to hit power lines and a wall before landing in a field. In 1951, ICAO was awarded the 2000 World Cup. See examples of accidents and incidents, due to misunderstandings of the English language. We are not just another English language school in aviation, our focus is not only to prepare students to pass the ICAO exam, but to fully prepare the student for everyday situations in the real world on the ground and in the air.
